Best-Selling Treatment of the Month Cosmelan Treatment

Before

Cosmelan Depigmentation Peel can treat all types of pigmentation including hormone-induced pigmentation such as: melasma, chloasma and superficial pigmentation like sun damage, freckles, dark spots.

With mask

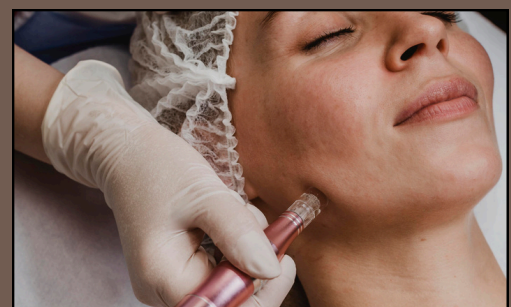

Its revolutionary formula has been designed to achieve maximum efficacy and ensure optimal tolerance. This method acts on the cells that are responsible for skin pigmentation, inhibiting melanin production in pigmented areas and thereby reducing or lightening unsightly blemishes and spots.

After

After the 1st or 2nd week of treatment with Cosmelan, the appearance of the skin is visibly improved. The spots are lighter and less noticeable while the skin looks younger and glows with a new radiance. The treatment has a high efficiency when treating cases of age spots, dark patches and hyperpigmentation. Individual results may vary.

Creating the Perfect Aesthetic Look

With the right care, every skin has the potential to glow!
